

## **DICE Teams Up with AltiGen Communications for Autodialing**

DICE Corporation and AltiGen Communications, award-winning manufacture of VoIP business phone systems, have teamed to deliver an integrated phone switch system that enables autodialing for DICE clients.

DICE Central Station software interfaces with the TAPI (Telephony Application Programming Interface) compliant AltiGen phone switch, providing an automated autodialing function to central station operators, for out-bound phone call communication. The partnership delivers a system to improve emergency management functions through VoIP and produce faster call routing.

In addition to the integrated DICE autodialing function, incoming calls are identified through a on-screen client interface called AltiView that enables call control, voicemail options, conferencing, recording, and call history reporting. The AltiView interface automatically launches for instant access to in-bound call traffic.

For clients interested in AltiGen Phone Systems, DICE Telecom, a division of DICE Corporation, now offers leasing options for AltiGen equipment and software. The financing incentives are flexible, offering up to a 63-month lease, with the option of purchasing the equipment outright at the end of the lease term for only \$1.00!

Call today for details regarding the integration of DICE Central Station Software and AltiGen Phone Systems. Also, ask about the recent partnership of DICE Telecom and Plantronics, the nation's leader in telephony headsets and accessories.
