DICE Corporation Launches Telecom Division

Bay City, MI, September 30, 2005 – To expand existing capabilities in IP PBX Technology, DICE Corporation launched a new division identified as DICE Telecom. The new addition to DICE Corporation has a devoted staff of sales and hardware personnel specifically geared to explore opportunities for customers that would benefit from the implementation of VoIP phone systems.

The focus of DICE Telecom is to help large or small companies implement and fully integrate VoIP phone system technology. The voice over IP PBX phone systems that DICE Telecom currently supplies are manufactured by AltiGen Communications. The award winning IP PBX business telephone systems include automated attendants, self administration, superior voice mail, built-in call recording, and comprehensive call detail reporting (CDR).

Benefits of these systems include automated software that works directly with a PC and offers ease of use with manageability. They are network expandable, connecting multi-site locations to allow easy conferencing and transfer handling for incoming calls. The network feature allows for business expansion without having to install completely new phone systems every few years.

Telephone solutions offered through DICE Telecom and developed by AltiGen Communications improve customer and operator interaction. Through improved communications, the phone systems can easily enforce the unification of your entire company.

About DICE Corporation

DICE Corporation (www.dicecorp.com) specializes in creating integrated central station monitoring software and accounting solutions for the security industry. Founded in 1983, DICE Corporation is privately held and operates on an international level with clients on six continents.
